

Accelerating UAT Automation with LexxIT AI Test Script Recorder

Overview

A leading cybersecurity organisation needed a faster, scalable way to automate complex UAT flows in Salesforce system. With frequent changes, multi-language requirements, and heavy manual effort, their QA team faced significant challenges in completing UAT efficiently. LexxIT AI's Test Script Recorder enabled them to record real user flows once and execute them across multiple environments QA, UAT, pre-production, and development dramatically reducing effort and accelerating release cycles.

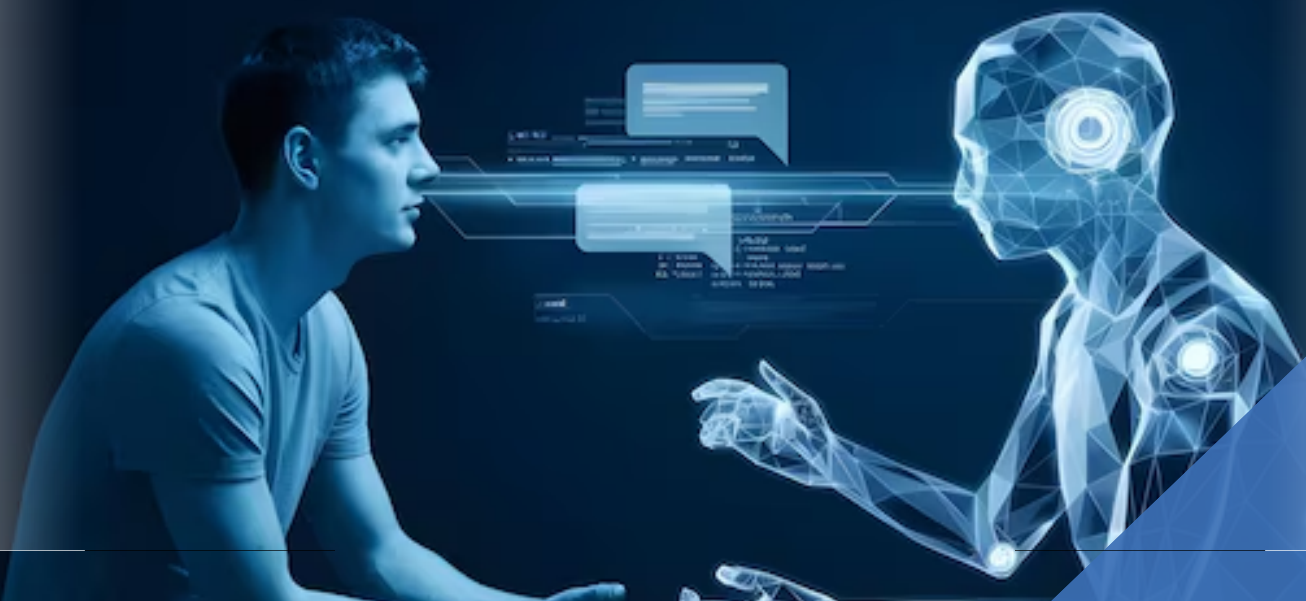

Challenges

A large cybersecurity organization was managing over 100 complex UAT business flows on Salesforce as part of its sales and customer lifecycle processes. The key challenges included:

- Highly **complex, end-to-end Salesforce flows**
- Frequent changes during UAT cycles
- **Manual test execution** consuming significant time and effort
- **Multi-language application support**, increasing testing complexity
- Difficulty automating **ERP-integrated flows** across Salesforce systems
- High dependency on skilled automation engineers

The QA team needed a fast, reliable, and scalable way to automate UAT without increasing cost or effort.

LexxIT's AI-powered Test Script Recorder allow recorded user flows to reuse and execute across QA, UAT, pre-production, and development environments.

Key capabilities used

- Easy record & playback of Salesforce UAT flows
- Support for complex, end-to-end business journeys
- Automation across Salesforce systems
- Multi-language compatibility, enabling global testing
- No-code / low-code approach, reducing dependency on automation experts

Business Impact

-  70% reduction in UAT execution time
-  Faster UAT cycles, enabling quicker go-live
-  Successful automation of 300+ Salesforce business flows
-  Reduced manual testing effort significantly
-  Improved test coverage across Salesforce and ERP integrations
-  Enabled non-technical employees to participate in test automation

Here's what their Head of IT shared with our team

"LexxIT completely changed how we approach UAT. We were able to automate over a hundred complex Salesforce flows without writing code, even with multi-language and ERP integrations. The speed at which we could record, reuse, and execute test cases helped us compress our UAT timelines significantly and go live with far more confidence." - **UAT Lead, Cybersecurity Organisation, USA**
